OVERVIEW

University of Engineering and Technology (UET), Lahore intends to purchase the specified "VDI Solution". The **Firms/suppliers** will be responsible for delivery and installation of the equipment.

1. Proposal Instructions (for BOQs on FOR Basis)

- 1.1 Single stage/two envelope bidding procedure shall be applied in response to the RFP (Request for proposal). The envelopes shall be marked as "TECHNICAL PROPOSAL" and "FINANCIAL PROPOSAL" separately plus "legible documents". The financial proposal of bids found technically nonresponsive shall be returned unopened to the respective bidder. Technically responsive bidders shall be informed, and their financial bids shall be opened in the next Central Procurement Committee (CPC) meeting after informing the technically responsive bidders.
- 1.2 Responding organizations shall deliver sealed proposal of the "FINANCIAL & TECHNICAL PROPOSALS" before or on **10 April, 2023,** at **10:00 AM.**
- 1.3 Proposals will not be accepted after the due date & time; proposals shall be delivered to the address given below before time. The TECHNICAL PROPOSALS shall be opened on the same day **10 April, 2023,** at **10:30 AM** in the presence of bidders or the representatives of the responding organizations.
- 1.4 Bidders are advised not to quote different options for each item (only one option is to be quoted).
- 1.5 Price should be mentioned on FOR basis and in Pak Rupee.
- 1.6 All BOQs submitted by the bidder must use the numbers and labels used in this Request for proposal.
- 1.7 The original Request for Proposal documents duly signed and officially sealed by the bidder must be submitted in whole with the proposals. Any conditional, ambiguous, incomplete, supplementary, or revised offer after the opening of tender shall not be entertained.
- 1.8 Any overwriting/crossing, etc. appearing in the offer may be properly signed by the person signing the tender. All pages of the tender must be properly signed & stamped. Offer with any overwriting/use of Blanco shall not be accepted in any circumstances.
- 1.9 Warranty for Active Equipment and VDI software license as approved by the manufacturers/suppliers, but not less than three-year replacement of Parts, Labor & Service on site must be covered for after sales and services (labor and parts) for a period of Three year from the date of delivery.

- 1.10 A call at deposit equal to 2% (Rs. 2.92488 M) of estimated cost (Rs 146.244 M) should accompany the Tender as Earnest Money drawn in favor of The Treasurer, UET, Lahore. Tender shall not be considered without Earnest Money. Bank guarantee will not be accepted.
- 1.11 10% of the contract amount shall be deducted as security at the time of the bill process. The deducted amount as security will be returned after successful completion of Defect Liability / Warranty Period, after repairing the defects in the equipment / replacement found during the warranty period.
- 1.12 The Successful Bidder will deposit blank stamp papers of value of 0.25% of the total offer / contract amount, purchased in the name of <u>Treasurer University of Engineering & Technology (UET), Lahore.</u>
- 1.13 The quantity of an order may vary depending on the quoted price and the allocated funds.
- 1.14 The decision of the committee will be binding on all concerned and will in no case be challenged on any forum.
- 1.15 The **TECHNICAL COMMITTEE** reserves the right to modify the conditions / specifications of the Tender Document with written intimation to all the participants those who have purchased the Tender Documents.
- 1.16 The delivery period for imported items will be **24 30 weeks** from the date of issuance of purchase/supply order.
- 1.17 Delivery & Installation (wherever mentioned) be completed according to the agreed upon schedule of works and time.
- 1.18 In case the tenderer fails to execute the contract strictly in accordance with the terms and conditions laid down in the contract, the Security Deposit shall be forfeited.
- 1.19 The **TECHNICAL COMMITTEE** will get the equipments inspected at UET Lahore and will have the right to reject the equipment if not found according to the stated specifications.
- 1.20 UET Lahore reserves the right to claim compensation for the losses caused by the delay in the delivery of equipment by deducting 1% of the total amount payable to the supplier/contractor as penalty.
- 1.21 It is the sole responsibility of the vendor to comply with local, national, and international laws.
- 1.22 In case any supply / material is found not in conformity with the specifications provided in the tender, either on account of inferior quality, defective workmanship, faulty design, faulty packing or is short supplied, or wrongly supplied, the supplier shall replace the same free of charges.
- 1.23 All the proposals submitted will become the property of the University.

<u>Technical Specifications (Supply, Installation, Integration and Commissioning turnkey basis (Firm/Company required to bid for whole tender).</u>

The minimum requirements of VDI Solution are given below. The quoted systems and all other specifications should be equal or higher.

ACTIVE EQUIPMENT	
Desktop Cloud Software:	Qty.
Overall Requirements:	
To ensure continuous investment and advancement in the cloud computing field, vendors must be members of international mainstream cloud computing standards organizations (such as OpenStack) and provide proofs.	
Provides virtualization software and desktop cloud software with independent intellectual property rights.	
In order to ensure the diversity and flexibility of hardware selection, the combination of software and hardware is required to be diverse. Vendors can provide integrated software and hardware delivery solutions or only software solutions to be compatible with hardware servers of different brands and performance in the future.	
The running interface of the virtual desktop is transmitted to the client in the form of screen change data. When no other device is connected, only the screen change instruction and the client input instruction are transmitted on the network. In this way, the data is not stored locally.	
There must be three local references of the OEM proposed solution in education sector and one reference should be in exam center.	
User Experience:	
Smooth operation and no frame freezing.	
To ensure the same startup experience as PC, the desktop startup and shutdown processes are visualized. Users can view the VM startup and shutdown processes completely. (Provide screenshots for proof)	
To ensure the same login experience as a PC, users can directly log in to and use virtual desktops after powering on TCs. (Provide configuration screenshots for proof.)	
To minimize the impact of the network on user experience, the desktop cloud must be able to be used smoothly when the bandwidth is low.	
When an existing PC is used as the access terminal, the start menu and local resources of the local PC are shielded. (Provide screenshots for proof)	
Management Capability:	
To quickly deploy the office environment, the solution provides the quick virtual desktop provisioning function. VMs can be created and provisioned in one operation without administrator intervention.	
Supports remote session management. Administrators can remotely disconnect and log out user sessions. The administrator can send messages to users in batches.	
Supports set virtual desktops to the maintenance mode to prevent users from logging in to the system by mistake during system upgrade.	
Supports remote assistance. Administrators can initiate assistance requests. Users	

can view and operate virtual desktops after obtaining their consent. Supports automatic upgrade of the virtual desktop agent. You can configure the administrator forcible update, administrator notification update, and user self-service update. Supports status monitoring and alarm reporting, health check, and one-click log collection for all desktop cloud infrastructure components. Supports customize the CPU, memory, disk, and network thresholds of clusters, hosts, and VMs. Alarms are classified into warning, minor, major, and critical alarms based on the severity. Email subscription is supported. The desktop cloud management system supports local accounts and AD domain accounts. Users can log in to the system only from a specified IP address segment and time segment. Password complexity and conditional lockout policies can be configured. The desktop cloud management system allows administrators to view, filter, and export operation logs. Logs cannot be modified or deleted but can be traced. CPU/memory specifications can be added online in batches. The settings take effect after VM restart. Virtual NICs can be added or deleted online, and disks can be expanded online. The functions take effect immediately. Security: To ensure data security, the desktop cloud system and data must be stored in the data center and cannot be stored on terminals. Supports security policies, such as forcible password change upon first login,
administrator forcible update, administrator notification update, and user self-service update. Supports status monitoring and alarm reporting, health check, and one-click log collection for all desktop cloud infrastructure components. Supports customize the CPU, memory, disk, and network thresholds of clusters, hosts, and VMs. Alarms are classified into warning, minor, major, and critical alarms based on the severity. Email subscription is supported. The desktop cloud management system supports local accounts and AD domain accounts. Users can log in to the system only from a specified IP address segment and time segment. Password complexity and conditional lockout policies can be configured. Email subscription is supported. The desktop cloud management system supports local accounts and AD domain accounts. Users can log in to the system only from a specified IP address segment and time segment. Password complexity and conditional lockout policies can be configured. The desktop cloud management system allows administrators to view, filter, and export operation logs. Logs cannot be modified or deleted but can be traced. CPU/memory specifications can be added online in batches. The settings take effect after VM restart. Virtual NICs can be added or deleted online, and disks can be expanded online. The functions take effect immediately. Security: To ensure data security, the desktop cloud system and data must be stored in the data center and cannot be stored on terminals.
Supports customize the CPU, memory, disk, and network thresholds of clusters, hosts, and VMs. Alarms are classified into warning, minor, major, and critical alarms based on the severity. Email subscription is supported. The desktop cloud management system supports local accounts and AD domain accounts. Users can log in to the system only from a specified IP address segment and time segment. Password complexity and conditional lockout policies can be configured. expanded online. The functions take effect immediately. Security: To ensure data security, the desktop cloud system and data must be stored in the data center and cannot be stored on terminals.
To ensure data security, the desktop cloud system and data must be stored in the data center and cannot be stored on terminals.
center and cannot be stored on terminals.
center and cannot be stored on terminals.
Supports security policies, such as forcible password change upon first login.
periodic password change, graphic verification code, and two-factor authentication,
to ensure user identity security.
Allows users to log in only from specified terminals or time by IP address
(segment), MAC address (group), and time range. Certificate authentication is
supported. A BYOD device without a certificate cannot be logged in to.
Supports binding between users and MAC addresses. Users can log in only from
terminals with specified MAC addresses. PCs, TCs, and mobile terminals are
supported. Supports manual entry, batch import, and automatic binding upon the
first login (users can be maintained and excluded).
Supports the watermark function. Administrators can configure the color, font size,
number of entries, tilt, and customized display content.
Supports automatic desktop reconnection upon intermittent network disconnection.
When the network is unstable, the desktop can be automatically reconnected without
re-entering the password. The number of reconnection times and interval are
configurable.
Supports common deletion and secure deletion of virtual desktops. Secure deletion
erases physical disks by writing zero data to prevent user data from being stolen or
maliciously used.
Supports transfer of files, folders, and clipboards between terminals and virtual
desktops. Supports read-only (only access), write-only (only access), and read-write
(bidirectional) modes.
Reliability:
HA is supported. When a server is faulty, VMs can be automatically migrated.
Supports cluster load balancing scheduling policies. Scheduling tasks can be
triggered based on the CPU and memory usage. VMs are dynamically selected
during startup and automatically migrated to low-load hosts during running,
implementing automatic load balancing.

	1
Supports live migration of virtual desktops between different hosts and storage LUNs without interrupting services.	
High-availability health monitoring and automatic failover capabilities are provided	
between infrastructure components without external components or manual	
assistance. After a user obtains a VDI desktop connection, the failure of a single	
component does not affect the user's use.	
The mutual exclusion function of management VMs can be configured to ensure that	
components that provide the same functions run on different physical hosts, ensuring	
high availability of the platform.	
Management data (such as databases, logs, and certificate files) can be automatically	
backed up. Management data can also be backed up to a third-party FTP server.	
Scheduled backup and immediate backup are supported.	
Scalability:	
To support capacity expansion, the number of online desktops that can be managed	
by a single desktop cloud management system is greater than or equal to 5000.	
VM Specification Requirements:	
A maximum of 500 VMs can be provisioned. Each VM provides 2 vCPUs, 4 GB	
1 1	500 VDI
memory, and at least 50 GB storage capacity to support smooth running of Windows	Clients
10 & 50GB volume disk.	
VMs are required for application deployment. The specifications are as follows: 16	03 VMs
vCPU, 32 GB memory, and at least 280 GB storage capacity.	05 (1)15

backup data when restoring and deleting backup data	
Distributed Storage Capability:	
Distributed storage software is built on standard x86 hardware. Non-open-source software is developed. For example, open-source Lustre, GlusterFS, and Ceph software cannot be used. The decentralized architecture and data redundancy technology at the software layer achieve high scalability and high availability. Multi-copy or EC data redundancy mode is supported to meet high reliability requirements. A single storage cluster can be expanded to 256 or more nodes.	
A single storage cluster supports a maximum of 64 storage resource pools, and a single storage resource pool supports a maximum of 512 disks. A single system supports at least 1000000 storage volumes, and the maximum capacity of a single volume is greater than or equal to 256 TB. Warranty:	
OEM warranty need to be added for 3 years 9*5*NBD	
Terminal:	Qty
Overall Requirements:	
Provides 500 terminals. To ensure consistency and convenience of maintenance, terminals must be of the same brand as desktop cloud software, virtualization software, servers, storage devices, and switches. Pass the CCC, CE, ROHS, and RFID certifications.	
Hardware:	
Vendors provide terminals with multiple architectures, including ARM and x86.	
Software:	
ARM-based terminals support the embedded operating system Android or Linux. Terminals using the x86 architecture support Linux or Windows. To manage terminals in batches, a terminal management system must be provided. The management system can remotely perform centralized maintenance, configuration, deployment management, security management, asset management, and performance monitoring on terminals. You can restore, upgrade, and install	
patches on terminals in batches. To prevent terminals from being damaged due to sudden power failure in the office area, the terminal management system provides power management functions such as periodically shutting down terminals. (Provide screenshots to prove it.)	
A self-service connection and maintenance tool is provided to facilitate troubleshooting and automatic rectification of terminal exceptions. The detection objects include but are not limited to the network adapter status, desktop agent, IP address, system clock, desktop protocol service status, and VM registration status. In addition, the one-click repair function is provided. (Provide screenshots for proof)	
The client integrated in the terminal needs to provide a network status indicator so that users can learn the network status in a timely manner when the network is abnormal. When user experience is not smooth, users can determine whether the	

network is normal based on indicators. (Provide screenshots to prove it.)

Network Switches:

24 Port Core Switches

24 x 10 Gig SFP+, 6 x 40/100 Gig QSFP28

Dual pluggable power modules, 1+1 power backup

Forwarding Performance 450Mpps or higher

Switching capacity: 1.5 Tbps or higher

The switch should support Jumbo frames up to 8Kbytes.

Must include redundant power supplies.

Must support 4GB RAM or higher.

Layer 2 Features

The equipment must support up to 200K MAC address tables.

Must support Mac-based, Port-based, protocol-based, and IP subnet-based VLAN assignment

Should support Ethernet Ring Protection Switching

Switch must support the IEEE 802.1ad (Q-in-Q) standard, voice VLAN or equivalent, Port aggregation, STP, RSTP, MSTP.

Layer 3 Features

The equipment shall support static route, RIPv1/v2, OSPF, IS-IS, BGP, RIPng, ISISv6, OSPFv3, BGPv4+, GR for OSPF/IS-IS/BGP, IP FRR, IPv4/IPv6 dual stack, VRRP.

Should support up to 120K routing entries.

Multicast

The equipment shall support IGMP proxy, IGMP snooping, MLD snooping v1/v2, PIM DM, PIM SM, PIM SSM, IGMPv1/v2/v3

OoS

Ingress and egress traffic shaping and VLAN based traffic limit.

Queuing algorithms, such as SP, WRR, DRR, SP + WRR, and SP + DRR.

Flow mirroring.

Security

The equipment must support bidirectional ACL, port-based ACL, VLAN-based ACL, CPU defense, DAI (Dynamic ARP Inspection), DHCP Snooping, Denial of Service (DoS) attacks, SYN Flood attacks, Port-based network access control according to IEEE 802.1x standard

Network O&M

02

The equipment must support SNMPv1/v2c/v3, Telnet, RMON, SSHv2, CLI, web management, automatic configuration, and batch remote upgrade. **48 Port Access Switches:** 48 x 10/100/1000Base-T ports, 4 x 10 GE SFP+ ports, 2 x 12GE stack ports 1+1 power supply backup Forwarding performance: 150 Mpps Switching capacity*: 200Gbps or more Must support RAM 2GB or more Co-Care 36Month(s) **Layer 2 Features** The equipment must support up to 32K MAC address tables Should support Ethernet Ring Protection Switching Support Mac-based, Port-based, protocol-based, and IP subnet-based VLAN assignment, up to 4K active VLAN, Guest VLAN or equivalent, voice VLAN or equivalent 12 **Layer 3 Features** The equipment must include Static route, RIP, RIPng, and OSPF features and provide at least 2K FIBv4 entries. Multicast The equipment must support IGMP snooping v1/v2/v3, MLD snooping v1/v2, multicast VLAN replication **QoS** The equipment must support ingress and egress traffic shaping and VLAN based traffic limit, flow mirroring **Security** The equipment must support bidirectional ACL, port-based ACL, VLAN-based ACL, automatic isolation of attack sources, CPU defense, DAI (Dynamic ARP Inspection), DHCP Snooping, IP Source Guard, port-based network access control

according to IEEE 802.1x standard Network O&M

The equipment must support SNMPv1/v2c/v3, Telnet, RMON, SSHv2, CLI, web management and automatic configuration

SFP Modules: Qty.

10G Single Mode SFP+ modules (1.4 KM Range)	15 Pair
10G Single Mode SFP+ modules (10 KM Range)	5 Pair

PASSIVE EQUIPMENT		
ITEM	SPECIFICATION:	Qty.
UTP Cable	Cat 6 UTP 4 pair cable, Conductor: Solid Bare Copper AWG 23, 305 Meter Box	68 Roll
Patch Panel	24 Port Patch Panel with Top Label Holder including 24 Cat-6 Toolless I/O With Shuttered Fully Loaded,	24 nos
Cable Manager	Front Cable Manager Horizontal, IU, PVC	30 nos
UTP Patch	Patch Cord, UTP Cat-6 Patch Cord, RJ45 to RJ45, 3- Meter, PVC	500 nos
